

JUAN NUÑEZ

SKILLS

Languages/Technologies: JavaScript, Node, GraphQL, MySQL, HTML, CSS, React, Express, TypeScript, Next, AWS, APEX, LWC, API, SQL, Postgres, MongoDB, JSON, Puppeteer.

Soft skills: Team player, self-taught.

EXPERIENCE

National University of Colombia, Bogota

Junior Fullstack Developer

February 2022 - May 2023

- Designed, implemented, and integrated a system for scheduling virtual meetings so students could get information about specific administrative procedures inside the university, making use of Google Calendar and Gmail's APIs, with React, Node, and MySQL.

PROJECTS

System for warning about water cuts in the neighborhood

2023 - Node.js

- Designed and implemented a system that warns you via email about a potential water cut if you are in a neighborhood that is scheduled to have water cuts, by periodically scraping the information necessary from the websites that publish it (but don't inform you personally).

Graph visualizer/analyzer (Colombian cities)

2022 - JavaScript/HTML/CSS

- Designed and implemented a graph visualizer that lets you view and analyze the time that it takes to travel from one city to another in Colombia, and also shows if you have to go through another city in between the two you chose to get the best time or the shortest path.

Video player

2020 - JavaScript/HTML/CSS

- Designed and implemented a minimalistic but modern-looking video player that, on top of everything else, allows for playlist viewing and previous/next buttons to easily change the video.
